DevOps

At Dataprise, we help organizations build a diverse array of software solutions to improve and enhance their business. Whether embarking on a new business solution or optimizing existing systems, our award-winning DevOps team offers the knowledge, qualifications, and experience to help. Comprised of veteran developers and systems administrators, our team offers deep institutional knowledge of established solutions such as SharePoint and Power BI, as well as growing expertise in more recent innovations in the software landscape. Additionally, we leverage proven, repeatable methodologies based on Project Management Institute (PMI) and ITIL® standards to deliver consistently high-quality results. We apply this methodology and expertise in the following core areas:

COLLABORATION AND CONTENT

In an increasingly digital world, effective collaboration and communication tools are essential to all organizations. Let our team of experts help you design, build, and implement unique solutions which empower your users to better store, share, and collaborate on documents while simplifying your business processes.

ANALYTICS AND AUTOMATION

Business intelligence (BI) plays a critical role in all aspects of business decision making. We specialize in helping organizations create streamlined, informative solutions that enable them to gain insight into their data, use that insight to drive intelligent business processes, and automate those processes for consistent high-quality results.

Within these two core capabilities, our key service offerings include:

- **SharePoint –** Empower your employees to easily store and share content and information through high-quality intranet, collaboration, automation, external communication, and BI.
- **OneDrive –** Efficiently store, edit, and manage both individual and shared content from anywhere via Microsoft's cloud-based file storage platform.
- **Teams –** Facilitate seamless, real-time communication and teamwork within your organization with integrated instant messaging, document sharing, and video and voice conferencing.
- **Power Platform –** Maximize the value you receive from your data through integrated and targeted implementation of Power BI, PowerApps, and Power Automate to drive greater insight into your business and benefit from dynamic process enhancements.

Power BI   **Microsoft Flow**   **PowerApps**
