FAQs:

1 What is Dataprise's approach to Project Management?

Our goal is to ensure completeness and quality of deliverables throughout the project lifecycle. Our team is comprised of certified Information Technology Infrastructure Library (ITIL) and Project Management Professional (PMP) project managers with extensive technical expertise and years of proven project success. We ensure each project achieves the stated objectives, deadlines are met, and technical issues are proactively addressed as they arise during project execution.

2 What kind of network design and build services does Dataprise offer?

Dataprise offers a variety of data center and hosting services to ensure your core infrastructure. At Dataprise, we've earned a solid reputation for building local and wide area network (LAN/WAN) solutions for organizations of all sizes. We also offer such implementation services as:

- Hardware installation
- Software installation and configuration
- Ethernet cabling
- Wireless solutions
- Physical/virtual server installation

3 What can I expect working with Dataprise on a technical project?

Dataprise has successfully planned and executed unique projects for thousands of customers, and we have perfected the process along the way. Based on industry best practices, our methodology focuses on meeting your goals through open communication and applied expertise. Our process includes:

- Dedicated technical project manager
- Pre-implementation technical review
- Installation check-points
- Documentation
- Best practices
- Customer verification and acceptance
