WINNING WITH DESKTOP-AS-A-SERVICE

Enabling the Anywhere and Anytime Power

BENEFIT 1

IMPROVED SECURITY

By utilizing DaaS, you have centralized management of all your desktop environments for added security. This allows for easy software and security patching, as well as centralized backup and disaster recovery.

BENEFIT 2

REDUCE INFRASTRUCTURE BURDEN ON YOUR IT DEPARTMENT

By utilizing Desktop-as-a-Service (DaaS), your IT department can focus on IT strategy rather than maintaining individual desktop environments. DaaS puts the intricacies of desktop virtualization infrastructure on the cloud host rather than your IT department.

BENEFIT 3

REDUCED HARDWARE COSTS

With DaaS, you can avoid costly hardware upgrades. Instead of having to purchase the hardware needed for VDI, you only pay per-user and for licenses.

BENEFIT 4

SCALABILITY WITH YOUR DESKTOP ENVIRONMENT

Virtual desktop environments with DaaS make it easy to add and remove users without having to manually configure a desktop. Addtionally, DaaS ensures your virtual infrastructure can handle the added workload.

BENEFIT 5

SUPPORT FOR MOBILE EMPLOYEES

DaaS is a great solution for employees who need to work on the network drives without being physically hooked up to the network. This allows you to grow and support your mobile, BYOD workforce while keeping your network secure.
