

Dataprise Onsite IT Infrastructure Support

The Right Expertise to Optimize Your Environment

Our *Onsite IT Infrastructure Support* services help your organization address critical technical knowledge gaps that you need filled in an onsite capacity. We offer assigned and pre-scheduled technology consultant services to help you optimize your networks and systems and continue to meet your technology needs as your business objectives change over time.

We have the tools and knowledge to optimize your environment.

For mid-market organizations, IT is a critical strategic enabler to promote further growth and development. However, mid-market organizations face the challenge of competing against larger enterprises which have vastly greater resources to devote to IT. Our *onsite IT infrastructure support* services offer a cost-effective way to get the specialized expertise you need to keep up with the growing and ever-changing technology landscape.

- Includes one or more assigned and pre-scheduled IT consultant(s) matched to your environment and needs
- Facilitates increased knowledge and documentation of your environment
- Provides access to a broader pool of skilled and certified consultants and subject matter experts
- Offers a more flexible and cost-effective option than hiring a single full-time employee with a limited set of skills
- Includes performance reporting and strategic recommendations to help you optimize your network and infrastructure
- Provides the flexibility to re-schedule your assigned consultant(s) as needed
