

Dataprise vCISO

Executive-Level Cybersecurity Leadership without the Overhead

Many organizations lack the in-house resources to lead cybersecurity efforts at the executive level. Internal teams either lack the necessary expertise or are too stretched to provide the strategic oversight needed for managing evolving threats and compliance expectations.

Cybersecurity is too important to be left as an afterthought. A vCISO offers experienced leadership, governance, and guidance without the commitment of a full-time executive hire, giving organizations a trusted advisor who brings strategic focus, regulatory insight, and board-level communication to the security function.

With a vCISO, your organization gains...

	Structure	<ul style="list-style-type: none"> • Stronger governance and policy foundation that support long-term maturity • Compliance and risk alignment following industry-renowned frameworks
	Leadership	<ul style="list-style-type: none"> • Strategic roadmap with clear priorities, resource planning, and forward-looking guidance
	Clarity	<ul style="list-style-type: none"> • Improved security visibility and reporting through metrics, board-ready briefings, and executive communication

A vCISO Provides

Strategic Security Leadership

Develop and maintain a cybersecurity strategy aligned with your organization's mission, risk tolerance, and business objectives.

Governance and Compliance

Ensure adherence to regulatory frameworks including NIST CSF, ISO 27001, HIPAA, GDPR, and CMMC with streamlined compliance processes.

Risk Management

Conduct comprehensive risk assessments, manage cyber risk profiles, and create prioritized remediation plans while evaluating and managing risks from vendors and partners across your extended business ecosystem.

Policy and Program Development

Create tailored cybersecurity policies and procedures designed for your specific organizational needs and operational requirements.

Incident Response and Planning

Develop, maintain, and test incident response plans with proven playbooks to minimize business impact during security events.

Security Awareness and Training

Implement targeted training programs to build organization-wide security awareness and strengthen your human defense layer.

Board and Executive Reporting

Provide clear security metrics and strategic insights through executive-level reporting that supports informed leadership decisions.

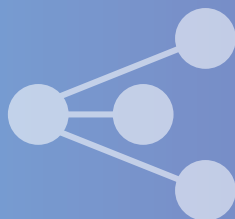

Common Deliverables and Activities

Working closely with your team, the vCISO provides strategic guidance tailored to your organization's objectives, regulatory environment, and current security maturity.

Based on these priorities, your vCISO may focus on a range of advisory areas, including but not limited to:

- Strategic roadmap development
- Budget planning and resource allocation
- Maturity benchmarking
- Tool selection support for compliance
- Policy development (data classification, acceptable use, remote access)
- NIST, CSF, HIPAA, CMMA, and ISO (and other framework) alignment and documentation
- Framework gap analysis and remediation planning
- Monthly briefing decks with security KPIs
- Risk posture summaries for leadership
- Tailored messaging for stakeholders
- Support during board meetings and investor due diligence
- Threat and risk prioritization matrix
- Risk register development and maintenance
- Security control assessments with remediation prioritization

About Dataprise

From Cyber Analysts to Executive Security Advisors with 25+ years of experience, Dataprise holds the highest standards for Security knowledge. We protect 2,000+ unique clients with cutting-edge security solutions that seamlessly integrate with your existing processes. Our team of 500+ IT professionals holds 750+ technical certifications and provides 24/7 support. As a top-tier partner with industry-leading methodologies and best-in-class toolsets, we deliver comprehensive security architecture tailored to your needs. From strategic security to expert execution, we've got you covered.
